SYSTEM MODULES & FUNCTIONS:

JOB ENTRY MODULE

The Job entry module is broken down into of 5 modules as per a typical clearing forwarding job. These are:

1. Declaration, 2. Shipping, 3. Verification 4. Port Processes, 5. Release / handover

Here the user is able to do the following:

- Enter all job data such as:
- File/Ref No., Client/ Consignee information
- BL No, Indent No
- Container No's, Weight, CBM, Payload, Loading Date, Port Exit Dates, Return dates, etc
- Description of goods
- Vehicle & Transporter Information
- Shipping Line, Vessel Voyage No's, ETA, Berthing, Lasting Date, Free days etc.
- Declaration Information, IDF No's, IDF fees, etc.
- All associated charges for each clearing process, Port Charges, Duty, etc.
- Bond amount & Status
- All personnel involved in the job, including commencement and finish dates for each process, etc.
- Job statuses through the various job stages (Pending Clearance through Dispatch)
- Automatically compute an **Overall Job status summary report**; to give a quick **snap shot** of all the processes for a given job, showing personnel assigned and time taken to completed the various tasks of the job.
- Store all data for each job as a record
- Enable searching and retrieval of records (documents) using various criteria e.g. BL number, etc.
- Enable inputting data by selecting frequently used data from lists to reduce time spent on typing and errors.

CONSIGNMENT PROGRESS UPDATER MODULE

The *Progress Updater* enables the user to enter updates for the consignment and generate A DAILY CARGO UPDATES STATUS REPORT that may be printed or emailed to the client.

ANALYSIS MODULES

The system features the following modules for data analysis and reporting:

- **JOBS ANALYSIS (STANDARD)**– this generates summary reports of jobs and enables the user to query / filter jobs by various criteria such as, type of job, job status, shipping line, reference no, etc.
- **JOBS ANALYSIS (DETAILED)**– this generates comprehensive reports of jobs and enables the user to query / filter jobs by various criteria such as, type of job, job status, shipping line, reference no, etc.
- **CONTAINER CONTROL** – this generates a summary of all CONTAINERS and automatically computes demurrage charges (using the demurrage charges calculator module) and also enables the user to query / filter containers using various criteria e.g. Container status; i.e.. (loaded, dispatched, return, etc).
The user is also able to easily search and update container information such as, container destination, T812 No, Interchange no, return dates, etc keeping records up to date.
- **SHIPPING ANALYSIS** – this generates shipping summary showing vessel ETA, Ship docking statuses, etc. the user is also able to query / filter jobs using client / consignee and Delivery order statuses as input criteria.
- **CARGO ANALYSIS**– this generates reports of the shipping part of jobs to provide summaries of vessel ETA, Ship docking statuses, etc, the user to query / filter jobs using client / consignee and Delivery order statuses as input criteria.
